Ecoprod Technique Ltd CPD

Saving water, reducing carbon in your clients' buildings

LEARNING OUTCOMES:

- Water scarcity, the reason change must happen
- Ecological Washroom Solutions
- Reduce water without compromise on design and performance
- Cut water use and reduce the carbon footprint of your clients' washrooms
- Make sure you're specifying the best options
- Innovation Products
- Behaviour change
- Return on investment for clients

TARGET GROUPS | AREAS OF APPLICATION

Commercial & public facilities

Swimming pools, sports facilities, schools, kindergartens, motorway service stations, trade & industry, prisons, airports, railway stations, institutions...

Semi-public & private facilities

Offices, leisure facilities, fitness studios, campsites, restaurants, hotels, visitor toilet facilities, etc.

Healthcare & medical facilities

Medical practices, hospitals, nursing & care homes, laboratories, research centres, etc.

Thames Water

Latest water update

What's the problem?

We've seen some downpours since we introduced the hosepipe ban but, despite a wetter than normal September, this month has so far been drier. River levels are still well below average, with reservoirs down by as much as 30% – the lowest level since 2003.

Any wet weather has barely begun making up for nine months of below-average rain in the last year (see update overleaf). The Government's National Drought Group has announced that even typical winter rain won't prevent a drought in some areas. Our region needs prolonged, above-average rain just to get back to normal levels.

This is why we're keeping the hosepipe ban in place for the foreseeable future. We're doing all we can to avoid more restrictions over the coming weeks – for example, we have over 200 teams working hard to preserve supplies by finding and fixing leaks across our region.

How you can help

We're really grateful for anything you can do to reduce water use, helping make sure there's more to go round for everyone. Here are our top three tips:

1. **Check your toilets:** Fix any loos where there's a continual trickle of water at the back of the pan. And if you have uncontrolled urinals, they're probably flushing around the clock – fitting a urinal control will make sure they're only flushing during opening hours.
2. **Look for leaks:** Cracked paving or damp patches are often clues to leaks. If you need to fix one, there's a list of contractors at thameswater.co.uk/plumber

Waterless urinals

The largest range of waterless urinals made from robust high-tech plastic and high-quality sanitary ceramics in a top design.

- ✓ No water consumption
- ✓ No chemicals
- ✓ Basin production is CO₂-neutral
- ✓ Touchfree operation

.....

EVERY DROP COUNTS

Welcome to URIMAT

This waterless urinal saves up to 100,000 litres of valuable drinking water each year!

The clean solution
No water, no oils, no chemicals, no odour

Urimat Waterless Urinals

Arguments that have persuaded even URIMAT's most demanding customers:

- ✓ Annual savings of at least 100,000 litres of drinking water per urinal per year
- ✓ No Water consumption
- ✓ No urine scale build-up
- ✓ No chemicals
- ✓ CO₂ reduction (at least 175g per m³ water)
- ✓ No flushing systems necessary
- ✓ CO₂-neutral manufacturing
- ✓ Worldwide patented system and design
- ✓ Microbiological cleaning system
- ✓ Advertising Income possible
- ✓ Durable materials
- ✓ All-round service with our own staff
- ✓ Successful since 1998
- ✓ Swiss quality
- ✓ Leasing options available
- ✓ Gain points for LEED & BREEAM accreditation

100,000

Aqualibur for healthcare

Changing people's behaviour via engagement!

- The best way to save water is through passive education and advising your clients and staff that there are good reasons behind design change in washrooms
- Create a water and carbon saving culture in your organisation.
- Run customer engagement campaigns
- Encourage customers and staff to change the way they do things and request ideas on water saving suggestions.
- Provide water strategy holistic documents to operations teams to look for improvements and quick wins which can make a difference.
- Ensure the design changes you make are understood by all invested parties, to avoid changes being made on projects.

Summary

- Water is becoming scarcer, and we need to effect change from traditional solutions
- We need to engage in business and communities to help behaviour change
- Washroom designs need to reflect and lead how people think about how we waste water
- There are many solutions available with a diverse range of designs to suit architect and interior designers' preference
- Low flow water taps, showers, electronic time controls all can impact on change
- Waterless Urinals, an easy design step change, starting now

Client Support

- Products specified to maximise green credentials
- Work with Clients to appreciate their start point
- Site Audits
- Specification design support, full material specification tools
- Fully costed offers with focus on return on investment
- Concept to Conclusion approach with clients
- Site Technical Training
- Customer Service Team
- Dedicated Account Managers
- Warranty Engineers Nationally
- Spares and Products stocked in UK next day delivery
