FOR PEST CONTROL OPERATORS

Stock it. Install it. Bill it.

Your treatment stops at the grate. The flies don't. Green Drain™ closes the drain they breed in and turns your toughest callback into a billable fix.

1. **Stock it.** One case rides on the truck and covers drains from 1.25 to 6 inches.
2. **Install it.** Lift the grate, press it in, replace the grate. Under a minute, no tools, no plumbing changes.
3. **Bill it.** Charge for the install, then inspect each seal at 6 to 12 months. Every high-drain account becomes a recurring line.

Built for pest control companies. Partner pricing for multi-location operators, plus the tools to sell drain service to your accounts. New to drain exclusion? We'll walk you through it.

Talk to our team about pricing.

"We have had issues with pest intrusion at some floor drain locations. Since we have installed these units we have monitored for activity and have found none. Just with the pest issue alone we are sold."

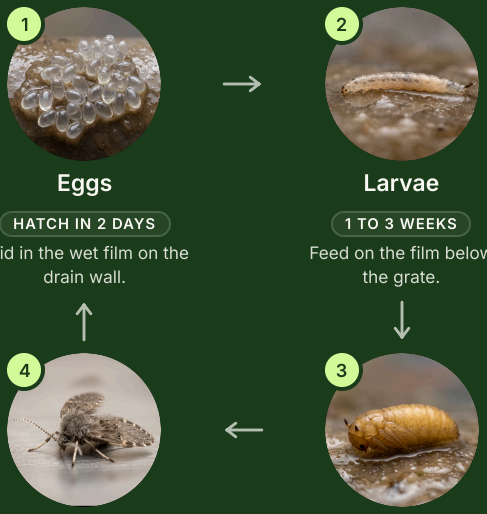

Barry Haynes, Director of Fleet and Facilities, Sysco Central Florida

Green Drain™

THE BREEDING CYCLE

Egg to adult in about three weeks. **Spray works on the adults. The next generation is in the drain.**

UP TO	UP TO	ABOUT
100	**300**	**3 wks**
eggs laid at a time	eggs per female in her lifetime	from egg to flying adult

1. **Eggs** — HATCH IN 2 DAYS — Laid in the wet film on the drain wall.
2. **Larvae** — 1 TO 3 WEEKS — Feed on the film below the grate.
3. **Pupae** — 1 TO 2 DAYS — Still in the film, out of reach.
4. **Adults** — IN YOUR ROOM — Fly up through the open drain and lay the next batch.

Green Drain™ seals the drain. The next generation stays in the pipe.

Green Drain™

FOR PEST CONTROL AND FACILITY TEAMS

You treat the room. **They breed in the drain.**

Green Drain™ seals the drain from below. Water goes down. Nothing comes back up. Add it to your small fly program.

Exclusion starts at the drain. **greendrains.com**

KNOW YOUR SMALL FLIES

Identi-**FLY**

Three small flies, three different habits. Name the fly and you know where to look.

Drain moth fly *Psychoda* spp.

Also called *drain fly, moth fly, filter fly, sewer fly*

LOOK FOR Fuzzy body, broad furry wings held like a roof, long beaded antennae. Short, hopping flights.

BREEDS IN The slimy film inside drains. It flies poorly, so the source is the nearest drain.

EGGS In masses of up to 100 at a time, on the film.

Fermentation fly *Drosophila* spp.

Also called *fruit fly, vinegar fly*

LOOK FOR Red eyes (usually), a tan front half and a dark, banded rear.

BREEDS IN Fermenting residue in drains, disposals, bottles and mops. Check produce too.

EGGS Laid one at a time, about 500 in her life.

Phorid fly *Megaselia scalaris*

Also called *scuttle fly, humpbacked fly, coffin fly*

LOOK FOR A humped back and plain dark eyes, not red. It runs across surfaces more than it flies.

BREEDS IN Moist, decaying matter: drain pipe linings, trash, spills under equipment.

EGGS Over 700 in her life.

All three can breed in a floor drain. Green Drain™ closes the opening they come up through.

Fly facts from university extension services.

HOW GREEN DRAIN WORKS

One-way by design. **Water passes. Pests don't.**

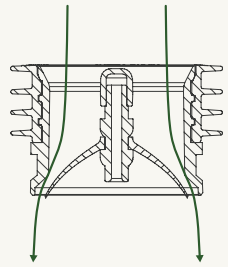

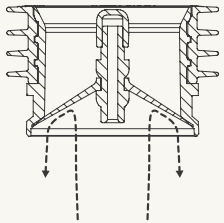

>99.9% **Aerosol retention versus an open drain.** SGS-tested device performance, 2025.

- **A physical barrier pests cannot pass.** The valve closes the opening they come and go through.
- **Stops sewer gas and odor at the source.** Closed between uses, every hour of the day.
- **Water still drains normally.** Flow opens the valve; it closes when the flow stops.
- **Works with the P-trap you already have,** full or dry. No water line, no power, no chemicals.

THE VALVE, TWO STATES

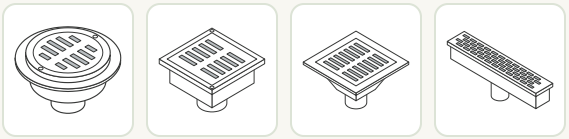

Water flowing.
The silicone skirt opens and water passes.

Flow stopped.
The skirt closes. Air, odor and insects stay below.

SIZING AND INSTALLATION

Fits the drains **you already have.**

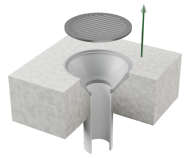

Round | Square | Floor sink | Trench

The grate shape doesn't matter. The pipe under it does.

MODEL	PIPE SIZE	FITS PIPE I.D.	HEIGHT	UNRESTRICTED FLOW
GD125	1.25 in	32-38 mm	27 mm	7.7 GPM
GD15	1.5 in	39-47 mm	30 mm	13.6 GPM
GD2	2 in	51-59 mm	33 mm	21.8 GPM
GD25	2.5 in	55-65 mm	35 mm	19.2 GPM
GD3	3 in	68-81 mm	50 mm	27.9 GPM
GD3/35	3-3.5 in	77-95 mm	50 mm	27.9 GPM
GD35	3.5 in	89-95 mm	50 mm	85.4 GPM
GD35/4	3.5-4 in	89-108 mm	50 mm	85.4 GPM
GD4	4 in	99-107 mm	50 mm	≥89.8 GPM
GD5	5 in	125-133 mm	42 mm	103.3 GPM
GD6	6 in	149-157 mm	50 mm	≥145.3 GPM

cUPC listed and tested to ASSE 1072, the plumbing standard for floor drain trap seals. Full specs at greendrains.com.

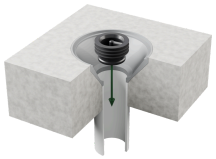

FITTED IN UNDER A MINUTE, NO TOOLS

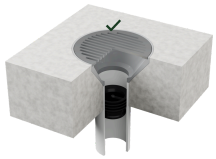

1 Lift the grate
Most lift straight out.

2 Measure the opening
Point A to point B, at the pipe.

3 Press it in
2-4″ (50-100 mm) deep.

4 Replace the grate
Done. Nothing to wire.

Keep it simple. Flush monthly. Inspect the seal at 6 to 12 months and replace as needed.
